GOLDACRES G6/ G8 CROP CRUISERS

Oilpath proudly manufactures three key manifolds for the Goldacres G6 and G8 agricultural chemical sprayers.

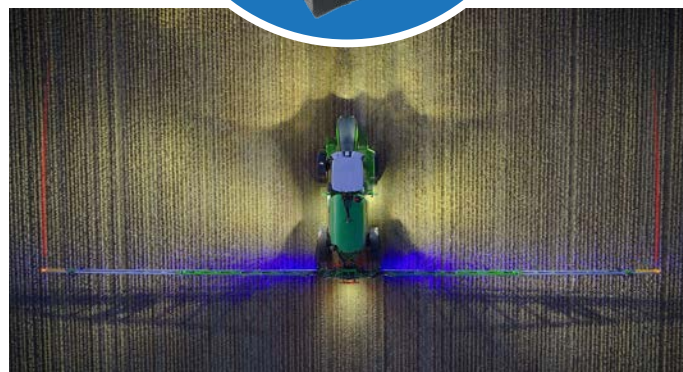

These manifolds are fitted to each sprayer – Chassis, Boom Control and Boom Breakaway Manifold.

► The Chassis manifold directs flow to the steering circuit as well as controlling flow to the product spray and fill pumps, plus ancillary functions.

► The Boom manifold controls multiple cylinder functions on the spray boom including multi-stage fold, tilt, yaw, lift and latch. Individual circuits have flow, pressure and load control options included as required.

► The Boom Breakaway manifold allows the main boom to move if a heavy force is encountered. The manifold incorporates an accumulator, flow and pressure regulation to allow the boom to return to its set position in a controlled manner.

Additional custom manifolds are also supplied to meet sprayer specifications. For more details on the Goldacres Sprayers, please visit goldacres.com.au
