PREMIER PROLINE

WHEN IT'S OILPATH
—IT WORKS

PREMIER PROLINE

Oilpath proudly manufactures key manifolds for Premier Proline and their production of heavy-duty crane borers.

These are custom designed and built Chassis and Stabiliser manifolds, imperative for daily operation.

► The Chassis manifold controls outrigger and stabiliser functions. Featuring a separate directional control valve used for each eight different functions. The manifold also controls the remote tools hydraulic circuit, including flow and pressure regulation.

Additional custom manifolds are supplied to meet weight and height variations. For more details on Premier Proline, please visit premierproline.com.au

► The Stabiliser manifold is a custom-designed load control valve which is manufactured and fitted to each stabiliser leg.
